PROFESSIONAL SUMMARY

AI/ML Engineering student with expertise in Python, Machine Learning, FastAPI, React, and Generative AI. Experienced in building end-to-end AI applications powered by LLMs, RAG, and NLP, with a strong focus on scalable backend systems and practical real-world solutions.

TECHNICAL SKILLS

Programming Languages: Python, SQL, JavaScript, HTML, CSS

Frameworks & Libraries: Scikit-learn, TensorFlow, PyTorch, NumPy, Pandas, Matplotlib, FastAPI, Flask, React, Next.js, Vite, Tailwind CSS, Node.js, Express.js, LangChain

Generative AI: OpenAI API, Gemini API, Grok API, RAG, LLM, Prompt Engineering, Embeddings, Vector Databases

Databases: SQLite, ChromaDB

Tools & Platforms: Git, GitHub, VS Code, Jupyter Notebook

Core Concepts: Machine Learning, Deep Learning, NLP, Computer Vision, Classification, Regression, Feature Engineering, Model Evaluation

EDUCATION

SAL College of Engineering, Ahmedabad

2023–2027

Bachelor of Engineering – Information Technology | CGPA: 8.61 / 10

Relevant Coursework: Machine Learning, AI, Data Science, DBMS, Computer Networks, Operating Systems

PROJECTS

AI Startup Success Predictor

GitHub

Tech Stack: Python, FastAPI, React, Scikit-learn, SQLite, Tailwind CSS

- Developed an AI-powered platform that predicts startup success using Machine Learning classification models.
- Implemented authentication, an analytics dashboard, CSV-based bulk prediction, and business intelligence features.
- Built REST APIs using FastAPI and integrated an interactive React dashboard for real-time insights.
- Evaluated multiple ML models, including Random Forest and Extra Trees, to improve prediction accuracy.

BharatBhasha AI

GitHub

Tech Stack: Grok API, HTML, CSS, JavaScript, Node.js, Express.js, NLP

- Developed an AI-powered multilingual communication platform supporting text and voice interactions across multiple Indian languages.
- Integrated Grok API to generate context-aware multilingual responses using NLP, improving communication accessibility.
- Built a scalable backend using Node.js and Express.js to support real-time AI-powered conversations.

Reverse Recipe Engine with Local Flavor

GitHub

Tech Stack: Python, Flask, Gemini API, HTML, CSS, JavaScript, Unsplash API

- Developed an AI-powered application that generates regional recipes from user-provided ingredients.
- Integrated Gemini API with prompt engineering to deliver personalized recipe recommendations and cooking instructions.
- Leveraged the Unsplash API to enhance recipe visualization and improve overall user experience.
- Achieved Top 10 Finalist recognition at AIT Hackathon 2K25 among competing teams.

ACHIEVEMENTS

- 2nd Place** – Secured 2nd position at the Flinders University AI Competition, Ahmedabad, and received an **AUD 300 cash prize** for developing an innovative AI solution.
- Top 10 Finalist** – Ranked among the Top 10 teams at **AIT Hackathon 2K25** for developing the **Reverse Recipe Engine with Local Flavor** AI application.
- 1st Prize** – Won 1st place in the **Robo Soccer Competition** by designing and implementing an autonomous robotic solution.
- Google Cloud Arcade Champion 2025** – Successfully completed multiple hands-on cloud computing and Generative AI challenges using Google Cloud technologies.

CERTIFICATIONS

- Machine Learning Certification (Elite) – NPTEL (2026)
- Build a Retrieval-Augmented Generation (RAG) Chatbot with Python – LetsUpgrade
- Data Analysis with Python Professional Certification – freeCodeCamp (2025)
- Python for Data Science, Artificial Intelligence & Development – IBM SkillsBuild (2025)
